

High reliability – low maintenance -
fast format change – compact construction

Sleeving Machine

Sleeving Machine to automatically sleeve products

Sleeving Machine

The blank design of the sleeve allows for the gluing flap to be positioned on the bottom (inside) or on the side (inside). Our development and construction department elaborates a customized Sleeving Machine concept according to specified requirements. The sleeve packaging offers ideal presentation options of our customers' products and guarantees economical material usage and appealing design at the same time.

Sleeving Machines are available in different types with speeds from 30 up to max. 150 sleeves per minute depending on the machine type, sleeve format, carton quality and product.

BM-Z	pneumatic infeed/ central drive/ feeder with articulated arm
BM-S	electronic infeed/ servo drives/ rotating feeder with 3 or 5 arms
